Experience

Rogers Cybersecure Catalyst, Ontario, Canada

Oct. 2025 – Present

Cybersecurity Intern

- Proactively identified data needs and managed collection of cybersecurity workforce datasets from **8+ sources**; gathered business requirements to clearly define analytical problems and desired outcomes.
- Applied analytical frameworks (hypothesis development, data preparation, combining sources, analysis, and validation) to surface actionable insights across **1,000+ records** and develop recommendations for stakeholders.
- Leveraged Python (pandas), SQL, and Power BI to build **5+ dashboards** and Excel reports visualizing workforce skill trends; automated data cleaning workflows that cut manual processing time by **~60%**.

Halian International, Toronto, ON, Canada

May 2024 – Sept. 2024

Project Coordinator Intern

- Gathered business and project requirements from **4 cross-functional teams** to clearly outline deliverables and timelines; maintained structured Excel tracking reports to communicate progress to leadership.
- Coordinated schedules and documentation across teams, ensuring **100% on-time** milestone delivery and accurate record-keeping.

Projects

Threat Intelligence Dashboard | Power BI, Python, Excel, Data Analysis

[GitHub Link](#)

- Identified data needs, collected and combined public threat intelligence datasets from **5+ sources** covering **1,000+ indicators**, and applied a full analytical framework (hypothesis, preparation, analysis, validation) to uncover attack pattern trends.
- Built interactive **Power BI** dashboards and Excel reports to present data-driven insights to stakeholders; mapped findings to strategic frameworks and cut manual analysis time by **~30%**.

Phishing URL Detector | Python, scikit-learn, Random Forest, Streamlit

[GitHub Link](#)

- Defined the business problem, developed a hypothesis, and collected a dataset of **10,000 URLs** from multiple sources; engineered structural and content-based features, assessed risks, and drew conclusions to validate the analytical model.
- Built a **Random Forest** classifier (Python, scikit-learn) achieving **98%+ accuracy**; deployed as an interactive Streamlit web app with real-time predictions on **10,000+ URLs** and clear result presentation.

Automated Trading Bot | Python, Claude AI, RSS, Linux VPS

[GitHub Link](#)

- Designed and built a Python system to collect, clean, and analyze live market data and **50+ RSS news feeds**; applied hypothesis-driven logic (volume spikes, sentiment signals) to generate structured buy/sell recommendations with configurable risk controls.
- Integrated **Claude AI** to analyze news headlines and convert unstructured data into actionable signals; deployed 24/7 on a Linux VPS with **100% uptime**, generating **\$5,000+ in returns** and growing portfolio value by **~30%**.

DocMind | FastAPI, ChromaDB, Ollama, RAG

[GitHub Link](#)

- Built a full-stack AI application (FastAPI + ChromaDB + Ollama) enabling conversational querying of multi-format documents across **1,000+ pages** using semantic vector retrieval; designed a clean UI with document management and real-time source-attributed responses.

Technical Skills

- Programming:** Python (pandas, scikit-learn), SQL, Java, Bash
- Visualization:** Power BI, Tableau, Excel (Power Query, PivotTables, dashboards)
- AI/ML:** Random Forest, RAG pipelines, LLM integration (Claude API), ChromaDB
- Data & Analytics:** Data pipelines, hypothesis development, data validation
- Reporting:** Excel reports, PowerPoint presentations, stakeholder communication
- Other:** GitHub, Docker, Linux VPS, REST APIs, BPMN, UML, Wireshark, Splunk

Certifications

- IBM Cybersecurity Fundamentals
- Microsoft Azure Fundamentals (AZ-900)
- Google Cybersecurity Professional Certificate
- AWS Certified Cloud Practitioner

Education

Toronto Metropolitan University

Sept. 2023 – Present

Bachelor of Commerce in Business Technology Management | Minor: Cybersecurity
